

Unit economics across 4 price tiers

Worked through at $v = £40$, $F = £3,000$, $T = 25$. Break-even shown as whole trolleys (rounded up).

Price tier	Price (£)	Contribution (£)	Monthly profit (£)	Break-even trolleys
Floor (£150)	£150	£110	£-250	28
Base (£200)	£200	£160	£1,000	19
Premium (£250)	£250	£210	£2,250	15
Aspirational (£300)	£300	£260	£3,500	12

WORKED EXAMPLE · £200

$\text{contribution} = P - v = 200 - 40 = £160$

$\text{monthly profit} = T \times (P - v) - F = 25 \times 160 - 3,000 = £1,000$

break-even trolleys $n^* = F / (P - v) = 3,000 / 160 = 19 \rightarrow$ pilot clears break-even with 6 trolleys to spare.
